

There's two! The inner and outer phases of the argument structure domain

Yvette Yi-Chi Wu (Harvard University)

CLS 62 • The University of Chicago • 17-19 April 2026

Austronesian “voice” systems

- **voice morphology**: morphological alternation on verb reflects which argument is the “**pivot**”
- **extraction restriction**: pivot is sole argument that can be A'-extracted (e.g. *wh*, relativization)

(1) ‘The man hunts wild pigs with a spear.’ (Paiwan; Ferrell 1979)

- q<m>alup [a **caucau**] tua vavuy tua sulu
<AV>hunt PIV man OBL pig OBL spear
- qalup-**un** nua caucau [a **vavuy**] tua sulu
hunt-PV GEN man PIV pig OBL spear
- si**-qalup nua caucau tua vavuy [a **sulu**]
CV-hunt GEN man OBL pig PIV spear

AV = actor voice; PV = patient voice; CV = circumstantial voice

- “**voice**” reflects movement to edge of argument structure domain, EP (cf. vP, Rackowski & Richards 2005)
- **highest internal argument** moves to **phase edge** → triggers non-AV (PV/LV/CV) morphology

(2) [EP **DP_{TH}** E [VoiceP DP_{AG} Voice [vP **t_{TH}** v [VP V]]]

(3) a. PV: theme = default highest internal argument
[VoiceP DP_{AG} Voice [vP **DP_{TH}** v [VP V] [PP P DP_{OBL}]]]

b. CV: oblique = introduced by ApplP
[VoiceP DP_{AG} Voice [ApplP DP_{OBL} Appl [vP **DP_{TH}** v [VP V]]]]

ditransitive / causative constructions

- an underlying alternation between PP and Appl does not straightforwardly apply in these cases

(5) ‘I gave him a/the book.’ (Seediq; fieldwork)

- wada=mu biq-**un** patis [ka **heya**] GOAL
PST=1SG.GEN give-PV book PIV 3SG
- wada=mu **s**-bege heya [ka **patis**] THEME
PST=1SG.GEN CV-give 3SG PIV book

(6) ‘I make him hit Paiwan.’ (Seediq; fieldwork)

- p-bbey-**un**=mu Pawan [ka **heya**] CAUSEE
CAUS-hit-PV=1SG.GEN Pawan PIV 3SG
- s**-p-beebu=mu heya [ka **Pawan**] CAUSAND
CV-CAUS-hit=1SG.GEN 3SG PIV Pawan

- instead, I adopt a **raising applicative** account →

key takeaways: there are two phases in the argument structure domain—EP and ApplP—that are landing sites for “outer” and “inner” object shift, that extract arguments in a stepwise manner

QUESTION: how to model stepwise movement?

- successive movement of DP_[A] through each phase edge
- circumvents Relativized Minimality (mixed A/ $\bar{A}$ -features)

- in CV, embedded **theme** and **causand** raises to Spec,ApplP (cf. Georgala 2012, Chang 2015, Nie 2019)

(7) a. ditransitive PV: [VoiceP DP_{AGENT} Voice [vP **DP_{GOAL}** v [VP V **DP_{THEME}**]]]
b. ditransitive CV: [VoiceP DP_{AGENT} Voice [ApplP **DP_{THEME}** Appl [vP **DP_{GOAL}** v [VP V **t_{THEME}**]]]]

(8) a. causative PV: [VoiceP DP_{CAUSER} Voice [vP **DP_{CAUSEE}** v [VP V **DP_{CAUSAND}**]]]
b. causative CV: [VoiceP DP_{CAUSER} Voice [ApplP **DP_{CAUSAND}** Appl [vP **DP_{CAUSEE}** v [VP V **t_{CAUSAND}**]]]]

#1 evidence of invariable base positions of arguments from binding (e.g. weak crossover, Principle C)

#2 evidence of E and Appl heads from morphological decomposition/ordering of voice morphology

evidence from phonological cycles

- **vowel hiatus resolution**: 1) **deletion within cycle**, versus 2) **epenthesis of glottal stop across cycles**
- similar evidence in Malagasy, Malayalam, Ojibwe (Travis 2000, 2010, Marantz 2007, Newell & Piggott 2014)

(9) lexical vs. syntactic causative (Malayalam; Michaels 2009)

- ‘water-CAUS’ /nana + -ikk/ [nanakk]
- ‘cry-CAUS’ /kara]_{phase} + -ikk/ [karajikk]

(10) v_{CAUS} vs. E_{CV} (Seediq; fieldwork)

- ‘CAUS-go’ /pa- + osa/ [posa]
- ‘CV-go’ /si- + [phase osa/ [so?osa]

typology of applicatives

- **thematic applicative**: base generates DP
- **raising applicative**: raises DP OR P-incorporation
- languages may use Appl for one or both functions, across or within the same construction

- Tagalog: base generates DP in Spec,ApplP (3)
- Seediq: raises DP to Spec,ApplP (7-8)
- Dinka: P-incorporation to Spec,ApplP (van Urk 2015)
- Bantu: **base generates DP** in **and raises DP** to Spec,ApplP (12) (cf. McGinnis 2001)

(12) [VoiceP DP_{AG} Voice [ApplP **DP_{TH}** **DP_{OBL}** Appl [vP **t_{TH}** v [VP V]]]]

- impacts ability to extract one of both arguments
- see literature on (a)symmetric applicatives in Relational Grammar (e.g. Kinyarwanda; Kimenyi 1976)
